INTERNAL GRAVITY WAVES

B. R. Sutherland

Departments of Physics and of Earth & Atmospheric Sciences
University of Alberta

Contents

Preface **vii**

List of Tables **xi**

1 Stratified Fluids and Waves **1**

1.1 Introduction 1
1.2 Stratified fluids 2
1.2.1 Stratified liquids and the ocean 3
1.2.2 Stratified gases and the atmosphere 4
1.3 Internal gravity waves 6
1.4 Co-ordinate systems 7
1.5 Lagrangian and Eulerian frames of reference 8
1.6 Equations of state 12
1.6.1 Equations of state for air 12
1.6.2 Equations of state for sea water 12
1.7 Conservation of internal energy 13
1.7.1 Thermodynamics of dry air 14
1.7.2 Potential temperature of a gas 15
1.7.3 Thermodynamics of sea water 18
1.8 Conservation of mass 19

1.9 Incompressibility 22
1.10 Conservation of momentum 24
1.10.1 The buoyancy force 25
1.10.2 The pressure gradient force 26
1.10.3 The Coriolis force 26
1.10.4 The viscous damping force 29
1.11 Hydrostatic balance 31
1.12 The Boussinesq and Anelastic Approximations 34
1.12.1 The speed of sound 34
1.12.2 Boussinesq liquids 35
1.12.3 Non-Boussinesq liquids 38
1.12.4 Anelastic gases 40
1.12.5 Boussinesq gases 42
1.13 Conservation of angular momentum 43
1.13.1 Vorticity in uniform-density fluid 43
1.13.2 Vorticity in stratified fluid 44
1.13.3 Potential vorticity 46
1.14 Conservation of mechanical energy 48
1.14.1 Kinetic and potential energy 48
1.14.2 Available potential energy 50
1.14.3 The Bernoulli equation 51
1.15 Wave theory 53
1.15.1 Representation of plane waves 53
1.15.2 The dispersion relation 56
1.15.3 Phase velocity 57
1.15.4 Group velocity 59
1.15.5 Representation of wavepackets 60
1.15.6 Plane wave and wavepacket evolution equations 63
1.15.7 Wave modes 65
1.15.8 Cross-correlations 67

2 Interfacial waves 75

2.1 Introduction 75
2.2 Surface waves 76
2.2.1 Finite-amplitude equations 76
2.2.2 Small-amplitude approximation 78
2.2.3 Dispersion relation, phase and group speeds 80
2.2.4 Polarisation relations 82
2.2.5 Fluid parcel motion 84

2.2.6 Energy transport 85
2.2.7 Momentum deposition 89
2.2.8 The Stokes drift 91
2.2.9 Momentum transport 93
2.2.10 Shallow water equations 97
2.3 Interfacial waves in a two-layer fluid 98
2.3.1 Equations of motion 99
2.3.2 Interfacial waves in infinite-depth fluid 100
2.3.3 Interfacial waves in finite-depth fluid 103
2.3.4 Shallow interfacial waves 105
2.4 Interfacial waves in multi-layer fluids 107
2.5 Laterally bounded interfacial waves 112
2.6 Shear flows 115
2.6.1 Derivation of equations 116
2.6.2 Rayleigh waves 118
2.6.3 Shear layer instability in uniform-density fluid 120
2.6.4 Shear instability of interfacial waves 122
2.7 Interfacial waves influenced by rotation 131
2.7.1 Small-amplitude wave equations 131
2.7.2 Inertial waves 132
2.7.3 Energetics of inertial waves 135

3 Internal waves in uniformly stratified fluid 141
3.1 Introduction 141
3.2 The buoyancy frequency 141
3.2.1 Vertical oscillations of a liquid 143
3.2.2 Vertical oscillations of an ideal gas 145
3.2.3 Stable, neutral and uniform stratification 148
3.2.4 Diagonal oscillations of a liquid 150
3.3 Boussinesq internal waves 151
3.3.1 Equations of motion in a liquid 151
3.3.2 Equations of motion in a Boussinesq gas 153
3.3.3 Dispersion relation 155
3.3.4 Phase and group velocity 158
3.3.5 Polarization relations 159
3.3.6 Hydrostatic and nonhydrostatic waves 161
3.3.7 Evanescent disturbances 164
3.4 Transport by Boussinesq internal waves 165
3.4.1 Zero mass/internal energy transport 166

3.4.2 Mechanical energy transport 166
3.4.3 Wave action and pseudoenergy 170
3.4.4 Momentum transport 172
3.4.5 Wave-induced mean flow 174
3.5 Bounded internal waves 178
3.5.1 Modes in rectangular box 178
3.5.2 Modes in non-uniform stratification 179
3.5.3 Internal waves near slopes 182
3.6 Non-uniformly stratified shear flows 183
3.6.1 Equations of motion 184
3.6.2 Singularities 187
3.6.3 Stability criteria 188
3.6.4 Piecewise-linear theory 189
3.6.5 Waves in uniform flow with uniform stratification 191
3.6.6 Trapped internal gravity waves 191
3.6.7 Shear instability in stratified fluid 194
3.7 Non-Boussinesq internal waves 197
3.7.1 Non-Boussinesq waves in a liquid 197
3.7.2 Anelastic waves in a gas 200
3.8 Internal waves influenced by rotation 205

4 Nonlinear considerations 213

4.1 Introduction 213
4.2 Weakly nonlinear theory 214
4.2.1 The nonlinear pendulum 214
4.2.2 Weakly nonlinear theory for partial differential equations 216
4.2.3 The nonlinear Schrödinger equation 219
4.2.4 Modulational stability theory 220
4.3 Weakly nonlinear interfacial waves 222
4.3.1 Theory for interfacial waves in infinitely deep fluid 222
4.3.2 Deep water waves 227
4.3.3 Deep interfacial plane waves 228
4.3.4 Deep interfacial wavepackets 229
4.3.5 Interfacial waves in finite-depth fluid 230
4.4 Solitary waves 233
4.4.1 Nonlinear shallow water equations 234
4.4.2 Moderately long weakly nonlinear interfacial waves 238
4.5 Weakly nonlinear internal waves 241
4.5.1 Perturbation Theory 241

4.5.2 Modulational stability 245
4.6 Breakdown of internal waves into turbulence 248
4.6.1 Parametric subharmonic instability 249
4.6.2 Overturning instabilities 254
4.6.3 Shear instabilities 256
4.6.4 Overturning driven by self-acceleration 258

5 Generation mechanisms 263
5.1 Introduction 263
5.2 Oscillating bodies 264
5.2.1 Oscillating cylinder in inviscid fluid 264
5.2.2 Oscillating cylinder in viscous fluid 271
5.2.3 Oscillating sphere 276
5.3 One- and two-layer flow over topography 281
5.3.1 Equations of motion for a one-layer fluid 283
5.3.2 One-layer small-amplitude hydrostatic flow 283
5.3.3 One layer small-amplitude nonhydrostatic flow 287
5.3.4 Two-layer flow 288
5.4 Steady stratified flow over topography 291
5.4.1 Froude and Long numbers 292
5.4.2 Flow over small-amplitude periodic hills 293
5.4.3 Internal waves over small-amplitude localized hills 300
5.4.4 Internal waves over large-amplitude localized hills 303
5.4.5 Internal waves over localized two-dimensional hills 307
5.4.6 Downslope windstorms 308
5.5 Tidal flow over topography 310
5.5.1 Barotropic tides 311
5.5.2 Inertia gravity wave beams 312

6 Wave propagation and spectra 317
6.1 Introduction 317
6.2 Extrinsic and intrinsic frequencies 318
6.3 Ray theory 319
6.3.1 General theory 320
6.3.2 Ray theory for waves in two dimensions 322
6.4 Ray Theory for Interfacial Waves 323
6.4.1 Surface waves approaching a beach 323
6.4.2 Interfacial waves approaching a slope 326
6.5 Ray Theory for Internal Waves 328

6.5.1 Internal waves in two-dimensions 328
6.5.2 Critical levels 330
6.5.3 Reflection levels 335
6.5.4 Caustics 338
6.6 Eckart resonance and tunnelling 341
6.6.1 Eckart resonance 341
6.6.2 Transmission and reflection of incident plane waves 344
6.7 Internal Wave Spectra 349
6.7.1 Oceanic internal waves 349
6.7.2 Atmospheric internal waves 355

A Suggestions for Further Reading 360

A.1 Textbooks 360
A.2 Review Articles 361
A.3 Journal Articles 361
A.3.1 Anelastic and other non-Boussinesq equations 361
A.3.2 Momentum and energy transport 362
A.3.3 Stratified shear flow stability 362
A.3.4 Internal waves at sloping boundaries and attractors 362
A.3.5 Evolution of finite amplitude internal gravity waves 363
A.3.6 Evolution of internal solitary waves 363
A.3.7 Parametric subharmonic instability of internal gravity waves 364
A.3.8 Internal wave interaction with its induced mean flow 364
A.3.9 Interaction between internal wave beams 364
A.3.10 Internal wave breakdown 365
A.3.11 Internal wave generation by oscillating bodies 365
A.3.12 Internal wave generation by steady flow over topography 366
A.3.13 Internal solitary wave generation by flow over topography 366
A.3.14 Inertia gravity wave generation by tidal flow 367
A.3.15 Internal waves at critical and reflection levels 367
A.3.16 Internal wave ducting and tunnelling 368
A.3.17 Internal waves in transient and veering flows 368
A.3.18 Oceanic internal wave spectra 369
A.3.19 Atmospheric internal wave spectra 370
A.3.20 Drag parameterization in general circulation models 370
