

Simple Digital Camera with Image Editor

Group 3

Jun Zhao, Kwan Yin Lau, and Xiang Gao

The System

- Major Components
 - D5M camera
 - DE2 Board
 - VGA monitor
- Image processing operations
 - Color Negation
 - Brightness Adjustment
 - Image rotation/reflection
 - Color filters
 - Edge detection
 - Color to Grayscale conversion

Algorithm

- **Negation**

$\text{buffer}[\text{pixel}] = 0xFF - \text{buffer}[\text{pixel}]$

- **Brightness**

$\text{buffer}[\text{pixel}(R,G,B)] = \text{buffer}[\text{pixel}(R,G,B)] +/- \text{Brightness Step Size}$

- **Clockwise Rotation**

$\text{index} = 2 * (320 * (320 - ((\text{index}/2) \bmod 320) - 1) + \text{row number})$

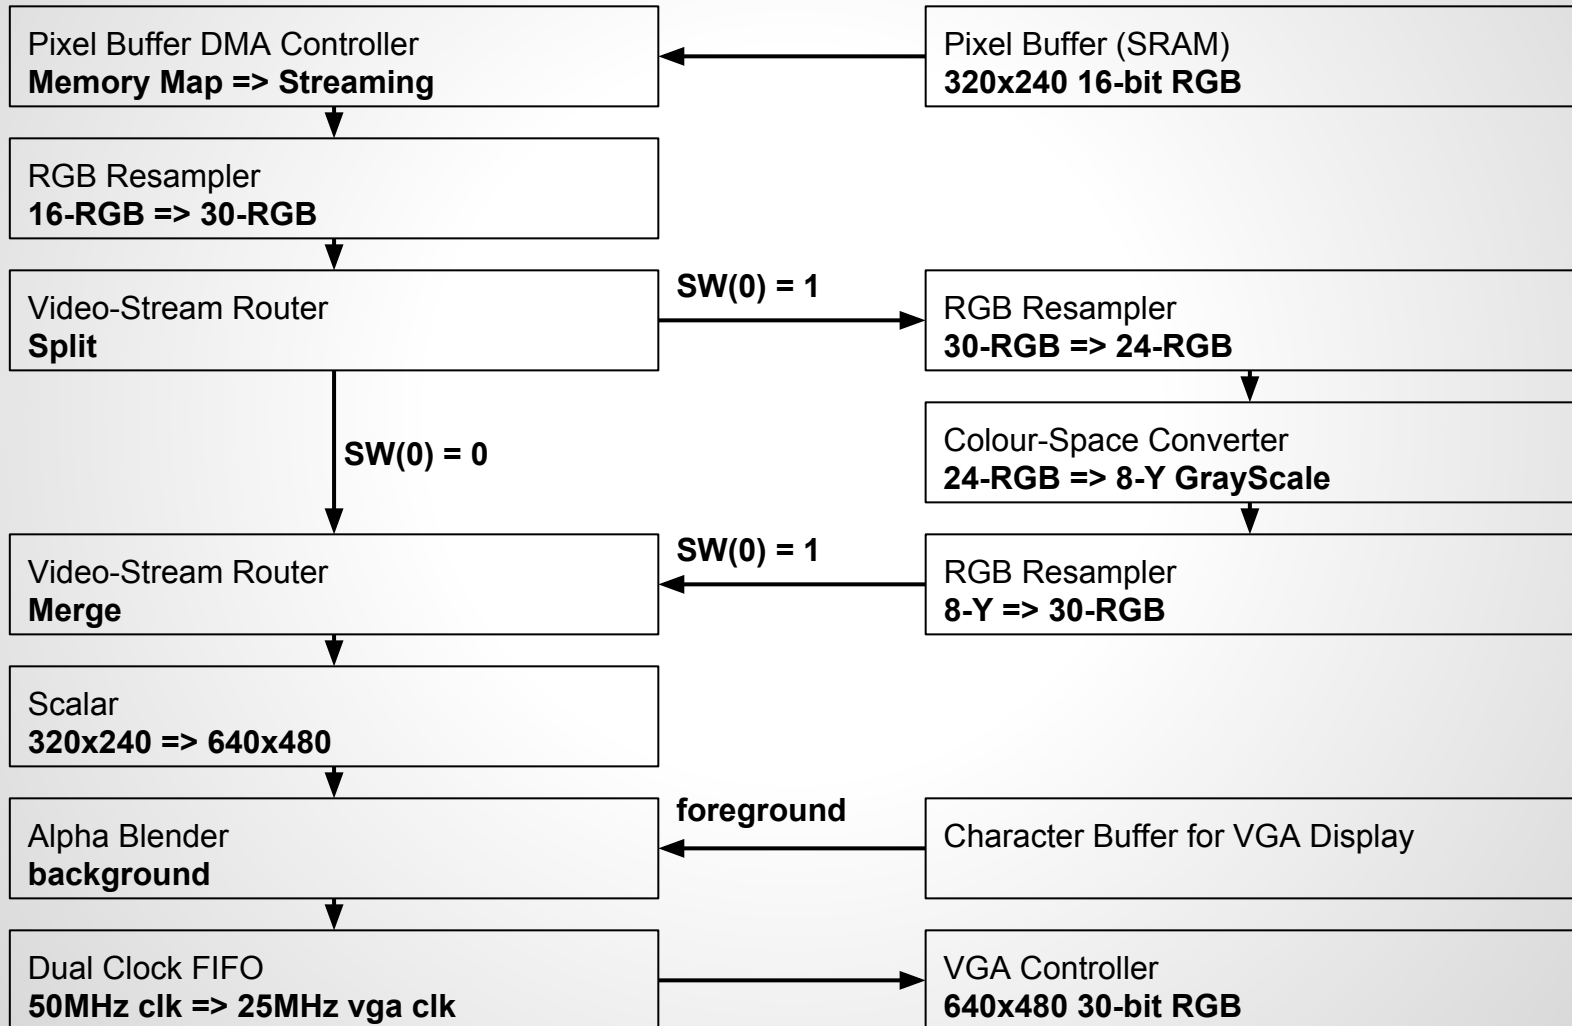

- **Mirror Reflection**

$\text{index} = 2 * (320 * \text{row number} + (320 - ((\text{index}/2) \bmod 320) - 1))$

- **Ageing Effect**

$\text{pixel}(R) = \text{pixel}(R) + 0x03; \text{pixel}(G) = \text{pixel}(G) + 0x02; \text{pixel}(B) = \text{pixel}(B) - 0x03$

Video Streaming

Web Editor

- Better user interface
- Server on DE2 board
- Client on web browser
- Send user control messages to the system
- Transfer image via Ethernet

Shutter

Colour Greyscale Edge Detection

Red + - Green + - Blue + -

Negate Ageing Effect Brightness

+ -

Rotate Left Right Flip

Horizontal Vertical

Back to Video

Motivation

- Image quality of smartphones not comparable to high-end cameras
- Limited editing options
- Exploit the hardware capability

Optional Features to Add

- More editor functions
 - Noise deduction
 - More interesting filters
- Replace Ethernet with Wi-Fi module
- Smart phone APP

Or as the Base of Other Systems

- Camera Remote Control
- Add real time video streaming to the web server - Surveillance System!

System Demo
