

Table 1: Losses computed for the 1000-point adaptive (A) and sequential local (SL) designs. True scale functions are shown and are used in the computation of the losses. Designs SL1, SL2, SL3, SL4 assume that $\sigma(x) \propto 1, x + x_N, \sqrt{x + x_N}, x + 0.25x_N$ respectively.

		True $\sigma(x) \propto 1$				True $\sigma(x) \propto x + x_N$
