Learning Objectives
In completing this project, you will:

- reflect on your understanding of course content
- apply your critical thinking and writing skills
- learn how to assess your peers’ understanding of course content

Requirements
To complete the assignment, you will write two multiple-choice questions based on course content (readings or lectures). One question will be based on course content from the first half of the course (up to the midterm exam). The other question will be based on course content from the second half of the course (from the midterm exam onward).

Creating a PeerWise Account
The questions you write will be submitted via the PeerWise website (https://peerwise.cs.auckland.ac.nz/), and will be accessible to the rest of the class. First, you must register to create an account; you will need the following information:

- **Course ID:** 20558
- **Identifier:** Your UAlberta anonymous ID. You can find it in your eClass profile (information here).

Do **NOT** use your UAlberta CCID or email address as your PeerWise username. Keep track of your PeerWise username and password. You will need it to log in, create questions, answer others’ questions, and comment on the questions written by other students in the class.

Writing Multiple-Choice Questions
Information on how to write questions, comment on other students’ questions, and more is available in PeerWise’s [A Guide for students](#).

Format
It is trivial to write simple multiple-choice questions, but these are not necessarily the best at assessing and practicing deeper understanding of the material. For example, take this question:

Ryle’s Regress is named for philosopher _________ Ryle

a) Gilbert.
b) Sullivan.
c) Gavin.
d) Robert.

Although this question is based on course content, it merely tests one’s ability to memorize information. Better questions assess the ability to apply knowledge correctly, or a more conceptual knowledge of material:

What is the fundamental goal of cognitive science?

a) To assume that perception is information processing.
b) To create the functional architecture of an information processing system.
c) To describe the infinite decomposition of the functional properties of the mind.
d) To understand the workings of the mind by creating strongly equivalent models.

Answering this question correctly requires a deeper understanding of material presented in lecture.
Here are some resources to help you write good multiple-choice questions:

- **Exam Questions: Types, Characteristics, and Suggestions**
- **Designing Multiple-Choice Questions**
- **14 Rules For Writing Multiple-Choice Questions**
- **Making the Most of Multiple-Choice Questions: Getting Beyond Remembering**

**Deadlines & Late Policy**

- **PeerWise question #1** (worth 1%) -- due **Friday, February 14** at 11:59 p.m.
- **PeerWise question #2** (worth 1%) -- due **Wednesday, April 8** at 11:59 p.m.

Each question must be submitted by 11:59 p.m. on the day on which it is due, or it will be considered late. Late assignments will receive a mark of zero. If you have exceptional extenuating circumstances (e.g., you cannot submit your assignment because you have alien hand syndrome, or the Infinity Gauntlet eradicated you from existence), please contact the instructor.

**Scoring Rubric**

Each multiple choice question is assigned credit for completion by the deadline. Your questions are not themselves assessed for quality or accuracy. However, peers may post comments to give feedback on your questions, as well as provide a rating. For each set of questions, the two top rated questions will receive a bonus mark of an additional 1%.

**Technical Support**

“Technical problems” are not accepted as an excuse for late or incomplete assignments. IST eClass Support has [Using eClass for Students](#) tutorials, ranging from System Setup to Submitting Assignments. For help with eClass, see IST’s [eClass support knowledgebase](#) or contact IST’s [eClass support](#). For other IT problems, contact IST’s [helpdesk](#).

**The Fine Print**

The University of Alberta is committed to the highest standards of academic integrity and honesty. Students are expected to be familiar with these standards regarding academic honesty and to uphold the policies of the University in this respect. Students are particularly urged to familiarize themselves with the provisions of the [Code of Student Behaviour](#) and avoid any behaviour which could potentially result in suspicions of cheating, plagiarism, misrepresentation of facts and/or participation in an offence.

Academic dishonesty is a serious offence and can result in suspension or expulsion from the University. These resources from Student Conduct and Accountability, and the University of Alberta Libraries can help:

- [Academic Integrity: Introduction to Academic Culture](#) - videos on citing, quoting, summarizing, and paraphrasing
- [Plagiarism](#) - plagiarism definition, and tips for avoiding plagiarism
- [Citing, Quoting, Paraphrasing & Summarizing](#) - how-to document from the UAlberta Centre for Writers
- [Foundational Tutorials: Citing](#) - interactive tutorials on citing, plagiarism, and paraphrasing, with examples

**Privacy Policy**

Be aware that you are subject to [PeerWise's privacy policies](#), and that your information may reside on servers located outside of Canada.
