

# Contents

<b>1</b>	<b>On models</b>	<b>1</b>
1.1	Introduction . . . . .	1
1.2	Classification of chemical process models . . . . .	4
1.3	Lumped parameter, steady state models . . . . .	5
1.3.1	Example of a stagewise separation process . . . . .	5
1.3.2	Process flow sheet simulation . . . . .	9
1.3.3	Example of a multicomponent flash . . . . .	11
1.3.4	Example of a phenomenological model . . . . .	13
1.3.5	Example of reactors in series . . . . .	14
1.4	Lumped parameter, dynamic models . . . . .	15
1.4.1	Example of cooling a molten metal . . . . .	15
1.4.2	Ozone decomposition . . . . .	16
1.5	Distributed parameter, steady state models . . . . .	17
1.5.1	Heat transfer through a tapered fin . . . . .	17
1.6	Distributed parameter, dynamic models . . . . .	20
1.6.1	Heat transfer through a tapered fin . . . . .	20
<b>2</b>	<b>Single nonlinear algebraic equation</b>	<b>22</b>
2.1	Introduction . . . . .	22
2.2	Bisection method . . . . .	24
2.3	Regula-falsi method . . . . .	29
2.4	Secant method . . . . .	29
2.5	Newton's method . . . . .	31
2.6	Muller's method . . . . .	32
2.7	Fixed point iteration . . . . .	34
2.8	Error analysis and convergence acceleration . . . . .	37
2.8.1	Convergence of Newton scheme . . . . .	40
2.9	Deflation technique . . . . .	41
2.10	Parameter continuation . . . . .	43
2.10.1	Euler-Newton continuation . . . . .	43
2.10.2	Homotopy continuation . . . . .	43

---

2.11 Software tools . . . . .	43
2.11.1 MATLAB . . . . .	43
2.11.2 Mathematika . . . . .	44
2.12 Exercise problems . . . . .	45
2.12.1 Multicomponent, isothermal flash model . . . . .	45
2.12.2 Compressible flow in a pipe . . . . .	46
2.12.3 A model for separation processes . . . . .	47
2.12.4 Peng-Robinson Equation of State . . . . .	49
2.12.5 Transient heat conduction in semi-infinite slab . . . . .	50
2.12.6 Turbulent flow in a parallel pipeline system . . . . .	51
<b>3 Review of Linear Algebra</b> . . . . .	<b>53</b>
3.1 Matrix notation . . . . .	54
3.1.1 Basic operations . . . . .	54
3.2 Matrices with special structure . . . . .	57
3.3 Determinant . . . . .	57
3.3.1 Laplace expansion of the determinant . . . . .	59
3.4 Direct methods . . . . .	60
3.4.1 Cramers rule . . . . .	60
3.4.2 Matrix inverse . . . . .	61
3.4.3 Gaussian elimination . . . . .	64
3.4.4 Thomas algorithm . . . . .	70
3.4.5 Gaussian elimination - <i>Symbolic representaion</i> . . . . .	71
3.4.6 LU decomposition . . . . .	75
3.5 Iterative methods . . . . .	78
3.5.1 Jacobi iteration . . . . .	80
3.5.2 Gauss-Seidel iteration . . . . .	81
3.5.3 Successive over-relaxation (SOR) scheme . . . . .	82
3.5.4 Iterative refinement of direct solutions . . . . .	84
3.6 Gram-Schmidt orthogonalization procedure . . . . .	85
3.7 The eigenvalue problem . . . . .	86
3.7.1 Wei-Prater analysis of a reaction system . . . . .	86
3.8 Singular value decomposition . . . . .	86
3.9 Genaralized inverse . . . . .	86
3.10 Power iteration . . . . .	86
3.11 Software tools . . . . .	86
3.11.1 Lapack, Eispack library . . . . .	86
3.11.2 MATLAB . . . . .	86
3.11.3 Mathematica . . . . .	86
3.12 Exercise problems . . . . .	86
3.12.1 Laminar flow through a pipeline network . . . . .	86

<b>4 Nonlinear equations</b>	<b>89</b>
4.1 Newton's method . . . . .	90
4.2 Euler-Newton continuation . . . . .	96
4.3 Arc-length continuation . . . . .	96
4.4 Quasi-Newton methods . . . . .	96
4.4.1 Levenberg-Marquadt method . . . . .	96
4.4.2 Steepest descent method . . . . .	96
4.4.3 Broyden's method . . . . .	96
4.5 Exercise problems . . . . .	96
4.5.1 Turbulent flow through a pipeline network . . . . .	96
<b>5 Functional approximations</b>	<b>98</b>
5.1 Approximate representation of functions . . . . .	99
5.1.1 Series expansion . . . . .	99
5.1.2 Polynomial approximation . . . . .	99
5.2 Approximate representation of data . . . . .	104
5.2.1 Least squares approximation . . . . .	105
5.3 Difference operators . . . . .	107
5.3.1 Operator algebra . . . . .	108
5.3.2 Newton forward difference approximation . . . . .	109
5.3.3 Newton backward difference approximation . . . . .	112
5.4 Inverse interpolation . . . . .	116
5.5 Lagrange polynomials . . . . .	118
5.6 Numerical differentiation . . . . .	122
5.6.1 Approximations for first order derivatives . . . . .	122
5.6.2 Approximations for second order derivatives . . . . .	124
5.6.3 Taylor series approach . . . . .	126
5.7 Numerical integration . . . . .	126
5.7.1 Romberg Extrapolation . . . . .	129
5.7.2 Gaussian quadratures . . . . .	132
5.7.3 Multiple integrals . . . . .	132
5.8 Orthogonal functions . . . . .	132
5.9 Piecewise continuous functions - splines . . . . .	132
<b>6 Ordinary differential equations - Initial value problems</b>	<b>133</b>
6.1 Model equations and initial conditions . . . . .	133
6.1.1 Higher order differential equations . . . . .	134
6.2 Taylor series expansion . . . . .	135
6.2.1 Alternate derivation using interpolation polynomials . . . . .	135
6.2.2 Stability limits . . . . .	137
6.2.3 Stiff differential equations . . . . .	139
6.3 Multistep methods . . . . .	141

---

6.3.1	Explicit schemes . . . . .	141
6.3.2	Implicit schemes . . . . .	142
6.3.3	Automatic stepsize control . . . . .	143
6.4	Runge-Kutta Methods . . . . .	145
6.4.1	Explicit schemes . . . . .	146
6.4.2	Euler formula revisited . . . . .	147
6.4.3	A two-stage ( $\nu = 2$ ) Runge-Kutta scheme . . . . .	147
6.4.4	Semi-implicit & implicit schemes . . . . .	150
6.4.5	Semi-Implicit forms of Rosenbrock . . . . .	151
6.5	Dynamical systems theory . . . . .	152
<b>7</b>	<b>Ordinary differential equations - Boundary value problems</b>	<b>153</b>
7.1	Model equations and boundary conditions . . . . .	153
7.2	Finite difference method . . . . .	156
7.2.1	Linear problem with constant coefficients . . . . .	156
7.2.2	Linear problem with variable coefficients . . . . .	157
7.2.3	Nonlinear problem . . . . .	159
7.3	Quasilinearization of nonlinear equations . . . . .	161
7.4	Control volume method . . . . .	163
7.5	Shooting method . . . . .	163
7.6	Collocation methods . . . . .	163
7.7	Method of weighted residuals . . . . .	163
<b>A</b>	<b>ChE Network</b>	<b>A.1</b>
A.1	Introduction . . . . .	A.1
A.2	Userid . . . . .	A.5
A.3	Overview of the network . . . . .	A.5
A.4	The client-server model . . . . .	A.8
A.4.1	File servers . . . . .	A.8
A.4.2	License servers . . . . .	A.9
A.4.3	X servers . . . . .	A.11
A.4.4	News server . . . . .	A.13
A.4.5	Gopher service . . . . .	A.15
A.4.6	World wide web service . . . . .	A.16
A.5	Communication . . . . .	A.16
A.5.1	Software tools . . . . .	A.16
A.5.2	Connection to the AIX machines from OS/2 machines	A.17
A.5.3	Connection to the AIX machines from a home com- puter . . . . .	A.19
A.5.4	Connection to the AIX machine from a DOS machine using tn3270 . . . . .	A.20
A.5.5	File transfer with Kermit . . . . .	A.21

---

A.5.6	File transfer with ftp . . . . .	A.22
A.5.7	File transfer from AIX to OS/2 machines . . . . .	A.23
A.6	Operating systems . . . . .	A.23
A.6.1	How to signon and logout . . . . .	A.23
A.6.2	Customizing your environment - the .profile file . . . . .	A.24
A.6.3	File management . . . . .	A.24
A.6.4	How to get online help . . . . .	A.25
A.7	Editors . . . . .	A.26
A.7.1	Emacs - <i>the ultimate in editors</i> . . . . .	A.26
A.8	Fortran compilers . . . . .	A.30
A.9	Debuggers . . . . .	A.31
A.10	Application programs . . . . .	A.32
A.10.1	ASPEN PLUS . . . . .	A.32
A.10.2	Xmgr . . . . .	A.32
A.10.3	T <sub>E</sub> X . . . . .	A.33
A.10.4	pine - the mail reader . . . . .	A.33
A.10.5	tin - the news reader . . . . .	A.34
A.11	Distributed Queueing System . . . . .	A.34
A.11.1	Example of a CPU intensive MATLAB job . . . . .	A.35
A.11.2	Example of a FLOW3D job . . . . .	A.36
A.12	Printing reports, graphs <i>etc.</i> . . . . .	A.36
A.12.1	Using the network printer from AIX machines . . . . .	A.38
A.12.2	Using the network printer from OS/2 machines . . . . .	A.39
A.13	Anonymous ftp service . . . . .	A.39
<b>B</b>	<b>MATLAB primer</b> . . . . .	<b>B.1</b>
B.1	Introduction . . . . .	B.1
B.2	Starting a MATLAB session . . . . .	B.2
B.2.1	Direct access on AIX machines . . . . .	B.2
B.2.2	Remote access from OS/2 machines or home computer . . . . .	B.3
B.3	MATLAB basics . . . . .	B.4
B.3.1	Using built in HELP, DEMO features . . . . .	B.5
B.3.2	Data entry, line editing features of MATLAB . . . . .	B.8
B.3.3	Linear algebra related functions in MATLAB . . . . .	B.13
B.3.4	Root finding . . . . .	B.15
B.3.5	Curve fitting . . . . .	B.16
B.3.6	Numerical integration, ordinary differential equations . . . . .	B.16
B.3.7	Basic graphics capabilities . . . . .	B.17
B.3.8	Control System Toolbox . . . . .	B.19
B.3.9	Producing printed output of a MATLAB session . . . . .	B.21
B.3.10	What are m-files? . . . . .	B.23

---

B.3.11 Programming features . . . . .	B.25
B.3.12 Debugging tools . . . . .	B.26
<b>C Unix primer</b>	<b>C.1</b>
C.1 Introduction to the shell and the desktop . . . . .	C.1
C.1.1 The ".profile" file . . . . .	C.2
C.2 Managing files . . . . .	C.4
C.2.1 Making sense of the directory listing - the "ls" command	C.4
C.2.2 Changing permission on files - the "chmod" command	C.6
C.2.3 Moving files . . . . .	C.6
C.2.4 Copying files . . . . .	C.7
C.2.5 Changing ownership of files - the "chown" command	C.8
C.2.6 Compressing files - the "compress" command . .	C.8
C.2.7 Removing files - the "rm" command . . . . .	C.8
C.3 Managing processes . . . . .	C.9
C.3.1 Examining jobs or processes - the "ps" command	C.9
C.3.2 Suspending jobs or processes . . . . .	C.10
C.3.3 Terminating jobs or processes - the "kill" command	C.10
C.3.4 Initiating background jobs - the "nohup" command	C.10
C.3.5 Script files & scheduling jobs - the "at" command	C.11
C.4 List of other useful AIX command . . . . .	C.12
<b>Bibliography</b>	<b>R.1</b>

# List of Tables

2.1	Example of fixed point iteration . . . . .	37
2.2	Feed composition & equilibrium ratio of a natural gas mixture . . . . .	46
3.1	Loss of precision and need for pivoting . . . . .	71
5.1	Convergence of $P_{2n+1}(x)$ to $erf(x)$ at selected values of $x$	100
5.2	Saturation temperature vs. pressure from steam tables .	105
5.3	Inverse interpolation . . . . .	118
5.4	Summary of difference approximations for derivatives .	124
A.1	List of machines in the chemical and materials engineering network . . . . .	A.7
A.2	List of software on the chemical and materials engineering network . . . . .	A.12
A.3	List of ftp commands . . . . .	A.22
A.4	List of frequently used emacs functions and their key bindings . . . . .	A.29
B.1	List of MATLAB Ver 4.0 help topics . . . . .	B.6
B.2	General purpose MATLAB Ver 4.0 commands . . . . .	B.7
B.3	Linear algebra related functions in MATLAB . . . . .	B.14
B.4	Graphics related function in MATLAB . . . . .	B.18
B.5	List of functions from control system tool box . . . . .	B.22
B.6	Program control related help topics . . . . .	B.27
C.1	List of other useful AIX command . . . . .	C.13

# List of Figures

1.1	Scheme of things - a personal view . . . . .	2
1.2	Three stage separation process . . . . .	5
1.3	Linear and nonlinear equilibrium model . . . . .	8
1.4	Example of material balance equations in a process flow sheet. . . . .	10
1.5	Multicomponent, isothermal flash process . . . . .	12
1.6	Reactors in series . . . . .	14
1.7	Heat transfer from a molten metal . . . . .	16
1.8	Heat transfer through a fin . . . . .	18
2.1	Graphs of some simple functions . . . . .	23
2.2	Graphical representation of some simple root finding algorithms . . . . .	25
2.3	MATLAB implementation of the bisection algorithm . . . . .	27
2.4	MATLAB implementation of the secant algorithm . . . . .	30
2.5	Graphical representation of Muller's scheme . . . . .	33
2.6	Graphical representation of fixed point scheme . . . . .	36
2.7	Graphical illustration of mean value theorem . . . . .	38
2.8	Graphical illustration deflation technique . . . . .	42
2.9	Multicomponent flash function . . . . .	45
2.10	Turbulent flow in a parallel pipe . . . . .	51
3.1	MATLAB implementation of inverse of an upper triangular matrix . . . . .	65
3.2	Naive Gaussian elimination scheme . . . . .	67
3.3	MATLAB implementation of naive Gaussian elimination . . . . .	68
3.4	Thomas algorithm . . . . .	72
3.5	MATLAB implementation of Thomas algorithm . . . . .	73
3.6	MATLAB implementation of LU decomposition algorithm . . . . .	77
3.7	MATLAB implementation of Gauss-Seidel algorithm . . . . .	83
3.8	Laminar flow in a pipe network . . . . .	86

---

4.1	MATLAB implementation of Newton scheme . . . . .	93
4.2	CSTR in series example - function & Jacobian evaluation	95
5.1	Error distribution of $\epsilon(x, n) :=  erf(x) - P_{2n+1}(x) $ for different levels of truncation . . . . .	100
5.2	MATLAB implementation illustrating steps of functional ap- proximation . . . . .	103
5.3	Structure of Newton forward difference table for $m$ equally spaced data . . . . .	111
5.4	Example of a Newton forward difference table . . . . .	112
5.5	Structure of Newton backward difference table for 5 equally spaced data . . . . .	114
5.6	Example of a Newton backward difference table . . . . .	115
5.7	Example of a inverse interpolation . . . . .	116
5.8	Structure of divided difference table for 4 unequally spaced data . . . . .	120
5.9	MATLAB implementation of Lagrange interpolation polyno- mial . . . . .	121
5.10	Illustration of Romberg extrapolation . . . . .	131
5.11	MATLAB implementation of quadrature evaluation . . . . .	132
6.1	Spring and dash pot model . . . . .	139
6.2	Stepsize control strategies for multistep methods . . . . .	144
6.3	MATLAB implementation of ozone decomposition model	145
6.4	Results of ozone decomposition model shows a stiff system behavior . . . . .	146
7.1	One dimensional finite difference grid of equally spaced data points . . . . .	156
7.2	One dimensional control volume discretization . . . . .	163
A.1	Anatomy of a Motif window . . . . .	A.4
A.2	Logical dependencies between various machines in the net- work . . . . .	A.6
A.3	Network File System server and clients . . . . .	A.9
A.4	Network Information Service . . . . .	A.10
A.5	X-Windows client-server model . . . . .	A.14
A.6	Anatomy of an emacs window . . . . .	A.27
C.1	Output of the "ls" command . . . . .	C.5
